## Looking to gain industry experience this summer?

The WashU BME internship program seeks to prepare our undergraduate students for the broadest employment opportunities in engineering and technology. WashU BME interns will undertake a 10-week internship located in the Greater St. Louis Area and have the opportunity to attend other learning experiences such as tours, panels and more.

### PRAISE FOR THE INTERNSHIP PROGRAM

Read about last year's program at [shorturl.at/xDUYZ](https://shorturl.at/xDUYZ).

I have made some of the best friends I've ever had through this. The people are half of what you do, and they can make your internship so fun.

This internship has helped me develop into a better engineer simply because of the hands-on experience I am getting. While the WashU BME course curriculum is amazing, **getting hands-on experience is invaluable.**

I think this internship was a great experience overall! I loved getting to see what BME industry is like as well as what working in a start up entails. I was lucky enough to go to Skandy Events every week, as well as the other company's events.

One of the biggest takeaways from this internship has been my ability to **refine my communication skills.**
